

File Code: 2210; 2230
Date: February 22, 2017

Dear Glen:

This document serves as your summer 2017 Annual Operating Instructions for the Juan Tank Allotment.

I. Authorized Livestock Numbers / Use Period:

Your 2017 Authorized Use Request has been approved and you are authorized the following Livestock Numbers and Periods of Use:

185 Cattle (Cow / Calf)	March 1, 2017 to February 28, 2018
5 Horses (Saddle)	March 1, 2017 to February 28, 2018

The 2017 authorized livestock numbers and the authorized period of use were determined based on past stocking rates and allotment inspections the past seasons on the Juan Tank Allotment.

Any changes to the 2017 authorized livestock numbers will require that you file an additional Authorize Use Request. Be advised that the Forest Service will need a minimum of 45 days to assess resource conditions and process a supplemental grazing bill for additional livestock. Please contact your Rangeland Management Specialist prior to making any decisions regarding increased livestock numbers.

II. Grazing Schedule:

The following is the planned grazing sequence for the summer 2017 grazing period. The pasture move dates shown are an estimate and may need to be amended based on actual conditions.

Pasture	Time Frame	Livestock Numbers
Juan Tank	03/01-05/15	185 Cow/Calf
Sisters	05/16-07/01	185 Cow/Calf
Button	07/02-10/15	185 Cow/Calf
Juan Tank	10/16-2/28	185 Cow/Calf
HQ Trap	03/01-02/28	5 Horses

Changes from the grazing schedule will be made only with Forest Service approval. The planned use period in a pasture may be shortened or lengthened depending on forage availability and utilization in key areas. Livestock pasture moves will be completed within a ten (10) day period and livestock will be actively herded from one pasture to another. It is imperative that once a pasture move occurs, the livestock remain within the designated pasture. For various reasons (i.e. pasture gates left open, cattle guards not maintained, cut fences, etc.), cattle may stray from the designated pasture. Preventing livestock from grazing adjacent allotments or your allotment's rested pastures is the permittee's responsibility.

III. Drought Management:

Drought is an inevitable occurrence in the southwestern United States. Both the Forest Service and grazing permittees must plan for drought as a normal part of management. During periods of drought, the following management actions may be necessary:

1. Stocking levels may need to be reduced. Reductions may be necessary prior to the permitted season of use and/or during the permitted season of use.
2. Season of use may need to be shortened. Depending on the severity of the drought and the stocking level, a reduced grazing season may be necessary.
3. Pasture use periods may need to be shortened. Pastures will not be regrazed during the same grazing season and this may ultimately result in an early exit from the allotment.
4. Utilization and/or seasonal utilization (grazing intensity) standards may need to be reduced. Depending on the severity of the drought and the stocking level, reduced utilization standards will likely result in shortened pasture use periods and may ultimately result in an early exit from the allotment.
5. Lack of livestock water, or poor distribution of livestock water, may result in reduced pasture/allotment use periods. Depending on forage conditions, this effect may be mitigated by hauling water to temporary livestock watering facilities.
6. Allotment Management Plan direction for pastures requiring rest or deferment will be followed. Livestock use of planned rested pastures due to drought will not be authorized.

IV. Grazing Strategy:

Grazing livestock in a deferred, rest-rotation grazing system for the summer grazing period. The management of livestock pasture moves in this allotment will continue to be based upon seasonal utilization guidelines and allowable forage utilization standards.

V. Allowable Utilization Standards

The maximum allowable level of utilization on herbaceous and non-riparian woody vegetation is 40%. This allowable use level is the utilization level permitted by both livestock and wildlife. Utilization is defined as the proportion or degree of current year's forage production by weight that is consumed or destroyed by animals. It is a comparison of

the amount of herbage left with the amount of herbage produced during the year. Utilization will be measured at the end of growing season when the total annual production can be accounted for and the effects of grazing in the whole management unit can be assessed. Pastures should not be grazed twice during the same grazing season unless resource conditions permit (e.g., above-average forage production, dormant-season grazing). If a pasture grazed twice in the same season, a light grazing intensity standard should be applied (20%).

VI. Seasonal Utilization

A light to conservative seasonal utilization guideline of up to 40% will be used within grazed pastures on the allotment. Seasonal utilization is defined as the amount of herbage removed through grazing or trampling during the grazing period. Seasonal utilization will be measured at the end of each pasture's livestock grazing period. The seasonal utilization guideline will be the primary factor in determining when livestock need to move to the next pasture; but other factors such as climatic conditions, opportunity for plant growth, and previous year's utilization level will also be considered. Annual reductions in the seasonal utilization guideline may be made based on resource conditions

VII. Resource Monitoring

Forage Utilization

Forage utilization within each pasture will be monitored and the allowable utilization standards (section IV) and the seasonal utilization guidelines (section V) will be enforced. This may result in earlier pasture moves than indicated in the Grazing Schedule (section II).

Forage utilization monitoring will occur at locations within pastures using the "key area" concept. Key areas are defined as "...a portion of range, which because of its location, grazing or browsing value, and/or use, serve as an indicative sample of range conditions, trend, or degree of use seasonally. A key area guides the general management of the entire area of which it is a part." Key areas will generally have the following characteristics: they will be approximately 20 to 500 acres in size; they will be located on productive soils with slopes less than 15%; they will have a plant community that is representative of the larger area; and they will generally be located 0.25 to 1.0 miles away from livestock water sources.

Forage utilization monitoring and its specific application to your allotment should be discussed with your Rangeland Management Specialist. Permittee participation in utilization monitoring is encouraged.

Permittee Monitoring

The permittee will monitor and document the following items on the enclosed Actual Use and Forage Utilization Monitoring Form: 1) Actual Grazing Period; 2) Actual Livestock Numbers; and 3) Average Utilization of all forage species at two different time periods: Just prior to livestock entering the pasture, and immediately after livestock leave the pasture. **It is**

very important that this monitoring be completed during the time frames specified, and that the Forage Utilization Monitoring Form is submitted to your Rangeland Management Specialist at the end of the 2017 grazing period.

VIII. Range improvements

Construction of New Structural Range Improvements

1. Construct new waterlots surrounding the following tanks: Holden Lake Tank #7913, Gate Tank #788901. Holden Lake Tank #7913 is currently being looked at by the Forest Service for grant opportunities. You must contact Range Specialist Cherie Owens and Archeologist Neil Weintraub ((928) 635-5647) for required clearances at least two weeks in advance of when you would like to begin work on Holden Lake Tank and Gate Tank waterlots.

Removal of Structural Range Improvements

There are no structural range improvements scheduled for removal this year.

Existing Structural Range Improvements

1. Clean the following dirt tank: Sereno Tank (007915). As mentioned above when it comes to cleaning out dirt tanks, all required clearances will need to be completed before hand. You must contact Range Specialist Cherie Owens and Archeologist Neil Weintraub (928-635-5647) for required clearances at least two weeks in advance of when you would like to begin work on Sereno Tank.
2. Reconstruct the following fences: Fence #7618 within the Juan Pasture ~1.5 miles. Fence #7928 within the Sisters Pasture ~1 mile. Fence #7617 reconstruct ~1.5 miles.
3. Construct a waterlot around Bootlegger Tank in the Juan Tank pasture, the 2014 Decision Notice and Finding of no Significant Impact for the Juan Tank Allotment. We will continue to check to see if Bootlegger Tank has a range improvement number.
4. General maintenance of fences throughout the allotment will continue as needed.

Please contact Range Specialist Cherie Owens once maintenance of individual structural range improvements is complete in order for her to conduct an inspection.

IX. Salting and Protein Block Practices

Supplemental feeding of livestock is allowed (to strategically manage livestock distribution and forage use) as follows:

1. Place supplements on previously disturbed areas (i.e., borrow pits) or natural bedrock outcrops when possible (supplement sites).
2. Locate supplement sites 0.25 mile or more from waters and key areas except where prior written permission has been obtained from the District Ranger.
3. Locate supplement sites where forage is abundant and utilized less than average.

4. Limit supplement types to non energy feeds such as salt, protein, and mineral blocks.
5. Use products that prevent the spread of noxious weeds, only certified weed free hay may be authorized on National Forest System Lands when snow has limited the use of available forage. The same considerations for distribution will apply when feeding hay as given above when using supplements.

X. Portable Water Hauling

Temporary sites for portable haul water may be needed and should be used as necessary to assist in livestock distribution. The following requirements will apply to portable haul water locations:

1. Coordinate with the District Rangeland Management Specialist to identify portable water haul locations for individual pastures prior to the grazing period.
2. To aid in livestock distribution, the portable water haul locations should generally be in areas of light forage utilization.
3. Portable water hauls will not be located in areas of depleted range, erosive soils, or sensitive plant or animal species.
4. Portable water haul locations will be moved when the desired forage utilization levels have been reached.
5. Portable haul water storage tanks and troughs will be removed when livestock leave the pasture.

XI. Fire

Please use caution during all ranch activities that could potentially start a fire. All ranch vehicles must be equipped with an axe, shovel, and water bucket. All open camp and branding fires require a ten foot fire ring cleared down to mineral soil.

During periods of critical fire danger the Forest Supervisor may declare a Red Flag Alert or issue other special orders. Under these conditions, the building or use of fires, the use of power saws, heavy equipment, ATVs and other motorized equipment may be prohibited on Forest Service land. All Federal, State and Local fire restrictions and regulations must be observed.

Report all fires to the Williams Ranger District Office at (928) 635-5600 or to the Kaibab National Forest Supervisors Office at (928) 635-8200.

Cooperation in the reporting, prevention, and suppression of fires will be expected as specified in Part 2, section 10 of your Term Grazing Permit.

XII. Motor Vehicle Use / Restrictions

As per the Decision Notice and Finding of No Significant Impact for the Juan Tank Allotment, the following is described for Travel Management. Under USDA regulations (36 CFR Part 212 – Travel Management), the Kaibab National Forest is implementing the Travel Management Rule (TMR). The TMR and subsequent implementation decision prohibits the public from use of motor vehicles for cross-country travel, as well as on roads closed to motor vehicle use. Under the terms and conditions of the term grazing permit, the permittee is authorized to conduct livestock grazing activities on National Forest lands within the Kaibab National Forest. Motor vehicle use that is specifically needed, authorized, and/or directly related to the terms and conditions of the grazing permit are exempted from the prohibitions applied to the general public. This includes motor vehicle use in order to conduct the following types of activities associated with the term grazing permit:

1. Normal vehicular use needed to maintain all range improvements assigned under the term permit as the permittee's responsibility for maintenance.
2. Normal vehicular use as needed to properly check on and care for livestock authorized under the term grazing permit.
3. Normal vehicular use as needed to check on forage, water, and general range conditions within the permitted grazing allotment.
4. Any other vehicular use needed to properly care for livestock and/or to redeem the permittee's responsibilities under the terms and conditions of the term grazing permit.

All motor vehicular use authorized shall be conducted in a responsible manner so as to not cause and/or accelerate resource damage and/or cause degradation to the soil or vegetation related resources. Special caution must be taken so that vehicular use occurs only when soils are sufficiently dry and/or frozen so as to avoid resource degradation or any long-lasting negative impacts.

Single purpose roads that are authorized for administrative use only through the term grazing permit may require occasional maintenance in order to access existing range improvements. Site-specific cultural and biological clearances will be conducted on these roads or portions of them as the need dictates.

XIII. Permittee Review

On February 9, 2017 Cherie Owens met with the ranch manager to develop and discuss the 2017 Summer Annual Operating Instructions for the Juan Tank Allotment. The manager has reviewed and agreed with these instructions.

If you have any questions or concerns, Rangeland Management Specialist Cherie Owens at (928) 635-5621 or cowens02@fs.fed.us.

Sincerely,

Danelle D. Harrison
